Knowledge

I'm on the front side of the software, my playground is HTML, CSS, Javascript and ReactJs. Curious, I'm always keen to learn and understand new tools. I work with BE, databases, APIs but it's more about finding where an issue can come from.

About me

I made my passion for code my job but learning new skills is my hobby. This goes from traveling, knitting, painting or cooking to keep the list short.

I was a volunteer twice a week at the Red Cross where I met and set up postal addresses for people in need. I'm also the technical administrator for postal and food pantry softwares.

Experience

Quiri SA / Software engineer

March 2026 - August 2026

Stepped in to rescue and finalize a critical legacy software project in C.

- Retro-engineering and fixing bugs or missing features.
- Being a strong advocate for modern methodologies like code versioning and ticketing.
- Updating legacy software.

Unite Us / Senior software engineer

November 2013 - February 2024

- I joined the company as a freelancer in the early stage completing the lack of the full stack developer skills in CSS, HTML and responsive design.
- We continued to grow and soon we were a small team with a product manager and a QA person.
- After a while, I took the lead on creating our own library of React components, from inputFields to complex filters and graphs.
- At this time, we were able to get me a visa and I spent 18 months at the HQ in NYC.
- The company grew a lot and I went from teams to teams where I could be the most helpful. I always kept a cross team communication.

- I blocked time to mentor junior developers every week for about 3 years, wishing I could have done more.
- I was leading some projects and also giving the lead to the teammate I thought was the fittest for. Projects were from some weeks to six months.
- As the company grew, I participated in many discussions about methodology, Agile, Scrum, sprints, estimations, and ticketing.

Axin SAS / Oracle developer

2007 - 2010

- Development: increasing software features and capabilities
- User training on software functions and processes
- Consulting for various product related

Quiri SA / Software developer

2001 - 2006

Control and measurement software written in C for industrial hydraulic test benches from the conception to the installation and user training.

- Development of product and features
- Management of product ideation, planning, development, and execution

Education

University Louis Pasteur Strasbourg / DUT

1999 - 2001

DUT Génie Electronique et Informatique Industrielle

Distinctions

People say I'm fun to work with. Is this a distinction?
